It currently consists of 10 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Center project name: L5154

* NOTE: This is a 'working draft' sequence. It currently
* consists of 33 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

* NOTE: This is a 'working draft' sequence. It currently
* consists of 61 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

NOTE: This is a 'working draft' sequence. It currently consists of 47 contigs. The true order of the places is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 6 contigs. The true order of the places is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 13 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                              Web site: http://www-seq.wi.mit.edu

NOTE: This is a "vorking draft' sequence. It currently consists of 66 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Consensus quality: 128926 bases at least Q40

On Feb 5, 2002 this sequence version replaced gi:12718191.
All annotations in this database entry are developed by
computational tools. It is therefore not explicitly noted in the
feature lines that evidence is not experimental.
Mapping was performed at The Sanger Centre

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              * NOTE: This is a 'working draft' sequence. It currently
consists of 11 contigs. The true order of the pleces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N. but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.

* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
                                                                                      9822 9611: Control of 0.0 bp

                                                                                                       * NOTE: This record contains 87 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* dentifying clones that may be gene-ritch and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.

Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for
                                                                                                                                                                                                                                                                                                                              _Length 67166;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                          putative exon was isolated of a gene that was designated CHD-W due to its close identity to the mouse CHD-1 gene and its W location. This CHD-W fragment was used to isolate a similar gene (see also AAT42751) from chicken. This gene was not W-located, and was named CHD-1A. A second, W-located chicken gene (CHD-W) closely related to CHD-1A was also identified (see also AAT42754). The CHD-1A and CHD-W genes are useful for bird sex determn.
                     {\tt GT-W} (AAT42755) was cloned from a W chromosome specific PCR it derived from great tit. It represents part of an intron in inked gene. By moving downstream from this sequence, a

The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The production of other cytokines in other cell populations. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are useful in gene therapy, vaccines or e.g. stem cell growth factor activity, immunomodulatory activities activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful. In the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                          New protein P25 prodn. - using P25 cDNA synthesised in vitro from ehrlich ascites tumour cell total mRNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Complementary (c) DNA was transcribed from Ehrlich ascites tumour poly-A mRNA and subsequent hybridisation of this with oligonuclectide probes resulted in 2 clones. Of which I (P25b) comprised this sequence. The other clone (P25a) was altered at the translation start site by site-directed mutagenesis (at Nde I site). This was then used to transform host cells and the prod. is useful in eg medical research. See also AAQ03969.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; polypeptide-tyrosinase 14; cancer; human immunodeficiency virus;

   The sequence represents Porcine Gal alpha(1,3) galactosyl transferase
gene targeting construct. The construct replaces exon 4
with the purconycin encoding gene. The invention relates to a method for
modulating the expression of a eukaryotic gene in a cell. The method
involves transfecting the cell with a nucleic acid construct. The
construct contains 2 nucleotide sequences which are portions of one or
more introns of the eukaryotic gene, and a sequence encoding a
selectable marker sequence is integrated into the gene
the expression of the marker results in modulation of
the expression of the construct is useful for making a
transgenic mammal. The construct is useful for reducing transplant
the transgenic mammal, and transplanting the harvested cells, tissue,
or organs into a patient in need. The knockout mammals produced by the
method are useful for screening drugs for immunomodulation (e.g for integral in the construct is useful for method are useful for screening drugs for immunomodulation (e.g for integral in the construct is useful for method are useful for screening drugs for immunomodulation (e.g for integral in the construct is useful for method are useful for screening drugs for immunomodulation (e.g for integral in the construct is useful for method are useful for method in the construct in

The sequence represents Porcine Gal alpha(1,3) galactosyl transferase introns 3.8, a gene used to make a gene targeting construct of the invention. The invention relates to a method for modulating the invention of a cutaryctic gene in a cell. The method involves transfecting the cell with a nucleic caid construct. The contains 2 nucleotide sequences which are portions of one or more introns of the eukaryctic gene, and a sequence encoding a selectable marker. The marker sequence is integrated into the gene sequence, so that expression of the marker results in modulation of the expression of the gene. The construct is useful for reducing transplant rejection by harvesting cells, tissue, or organs from the offspring of the transgenic mammal. The knockout mammals produced by the method are useful for screening drugs for immunomodulation (e.g for systemic lupus erthematosus, rhemmatoid arthritis and immune-haemolytic anaemia) and corpus proteins of interest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human, mouse; chicken; rat; secreted expressed sequence tag; sEST; sexpressed sequence tag; EST; probe; chemotatic; proliferative; thmunomodulatory, haematopoietic; chemotatic; proliferative; thrombolytic; antifinflammatory; cytostatic; antibacterial; antifingal; antiviral; antidiabetic; antiasthmatic; vulnerary; antiparkinsonian; antiviral; antidiabetic; neuroprotective; nootropic; antiparkinsonian; encerborporotective; anticonvulsant; antidepressant; gene therapy; vaccine; autoimmune disorder; multiple sclerosis; allergic condition; insulin dependent diabetes; asthma; myeloid cell deficiency; ulcer; lymphoid cell deficiency; burn; osteoporosis; osteoarthritis; central nervous system disorder; Alzheimer's disease; stroke; parkinson's disease; untingron's disease; stroke; haemophilia; thrombosis; inflammatory disorder; crohn's disease; tunmour; infection; depression; psoriasis; ss.
                                                                                                                                                          Modulating the expression of a eukaryotic gene in a cell, involves transfecting the cell with a nucleic acid construct that disrupts at least a portion of the DNA sequence of the gene to be modulated -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

AMA MANA126 to AMA45925 represent specifically claimed secreted expressed sequence tags (BESTS), isolated from human, mouse, chicken and rat tissues they were isolated from human, mouse, chicken and rat tissues they were isolated from The activities include: the Lissues they were isolated from. The activities include: chemotactic; proliferative; immunomodiatory; hamantopoiatel; chemotactic; proliferative; immunomodiatory; hamantopoiatel; chemotactic; analgesic; haemostatic; thrombolytic; antinifiammetory; chemokinetic; antibacterial; antifingal; antivital; antidiabetic; antisarthatic; unthearthisonian; antitiporiatic; cerebroprotective; cheropic; aftiparkinsonian; antitiporiatic; cerebroprotective; notropic; aftiparkinsonian; antitiporiatic; cerebroprotective; cherapy and in vaccines. The SESTs can be used for gene therapy and in vaccines. The SESTs can be used for gene defaultication and isolation of full-length change accoded by the SESTs can euseful in assays for determining biological activity and raising are useful in assays for determining biological activity and raising antibodies. They may be useful for treatment of autoimmune disorders (multiple sclerosis, insulin dependent diabetes), allergic conditions (asthma), myelold or lymphoid cell deficiencies, wounds, burns, ulcers, catepoarthiitis, central nervous system disorders (casthma), thrombosis), inflammatory disorders (crohn's disease), tumours, bacterial, fungal or viral infections, depression and disease), tumours, bacterial, fungal or viral infections, depression and disease), tumours, bacterial, fungal or viral infections, depression and second disease).
                                                                                                                                                                                               Isolated polynucleotides, and encoded proteins, comprising secreted expressed sequence tags (eSSTs), useful for treating various disorders such as autolimnue, infectious, and central nervous system disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     01-SEP-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ó
                                                                                                                                                                                                                                          This sequence represents a prostate cancer specific nucleic acid sequence. The invention relates to a method for diagnosing cancer, tumour progression, hyperproliferative cell growth or accompanying biological and physical manifestations. The method involves contacting the biological sample with a probe that comprises a sequence capable of specification cany of the 339 nucleotide sequences given in the products and methods of the invention can be used for the diagnosis, prognosis, and treatment of cancer, tumour progression, hyperproliferations of the invention can be used for the diagnosis, properproliferative cell growth, and accompanying physical and biological manifestations. They can be used particularly for prostatic disorders such as metastatic prostate cancer, localised prostate cancer, or benign prostate hyperplasia (BPH).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        antiparasitic; cardiant; immune disorder; cardiovascular disorder; neurological disease; infection; nephrotropic; gene therapy; vaccine; ds.

isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (antigaonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rhematoid arthritis and ulcrative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.inf/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; nootropic; neuroprotective; cytostatic; dermatological; virucide; immunosuppressive; antiinflammatory; antiinfly, antibacterial; vulnerary; antiparkinsonian; antisickling; antinanemic; antiarthritic; cancer; antiinflammatic; hepatotropic; cerebroprotective; antiinflammatory; antiilect; antiinflammatory; antiilect; antiinflammatory; antiparasitic; cardiant; immune disorder; cardiovascular disorder; neurological disease; infection; nephrotropic; gene therapy; vaccine; ds.

Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases -

Disclosure; SEQ ID NO 13729; 1701pp + Sequence Listing; English

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenita; (b) immune disorders e.g. Addison's disease, allergies, autoimmune harmolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and a parasitic infections.

This sequence represents cDNA encoding the maize pathogen resistance-associated protein Mari. The maize Rarl protein has 794 homology to the barley Rarl protein over its entire length. The Rarl protein is required for the function of certain plant resistance (R) gene products which, along with pathogen avirulence (avr) gene products, mediate the hypersensitivity response (HR), a series of physical and physiological changes in host cells local to the site of infection which limits the spread of the infection. Rarl nucleic acids may be used in the generation of transgenic plants and seeds that exhibit increased expression of the Rarl protein. They may be used in this way to enhance resistance to a variety of pathogens, particularly viruses and fundi (e.g., powdery wheat, alfalfa, cotton, rice, barley, and millet.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New polynucleotides, useful for improving the virus-resistance of plants such as maize, soybean, sunflower, sorghum, canola, wheat, alfalfa, cotton, rice, barley, and millet, comprise nucleic acids encoding a Zea mays Rarl proteins
                                                                                                                                                                                                       Maize pathogen resistance-associated protein Rarl-encoding cDNA.
                                                                                                                                                                                                                                      Maize; Rarl; pathogen resistance-associated; plant; HR;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to human breast cancer expressed polynucleotides $AALOSO'89) and methods of assessing whether a patient is affilicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and potentially preventing breast cancer. The polynucleotides and encoded polypeptides are also useful for isolating compounds with cytostatic activity.
printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

(I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with happropriate (I) expression. For example, they may be used to treat disorders associated with decreased example, they may be used to treat disorders associated with decreased example, they may be used to treat disorders associated with decreased that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) supplement smy be used to product the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 cancers and cancer metastases of haematopoietic-derived cells. AAK64703 csequences from the present invention. AMX64942 to AAK876950 and AAM82169 expressent thums immune/haematopoietic-antigen and AAM82169 crepresent sequences from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; immune; haematopoietic; immune/haematopoietic antigen; cancer; cytostatic; gene therapy; vaccine; metastasis; ds.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
concerns and extinity of (I) by expressing inactive proteins or to
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
colynucleotides may be used to produce the secreted (I), by inserting
the nucleic acids into a host cell and culturing the cell to express the
concerns and treat immune/haematopoietic-related diseases, especially
cancers and cancer metastases of heematopoietic-derived cells. AAK64703
concers and cancer metastases of heematopoietic antigen genomic
sequences from the present invention. AAK4942 to AAK54950 and AAM82169
represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
